

creating competitive advantage

# Mission Critical Linux

Venue: IESL Auditorium  
Date: 10-Mar-2004  
Presenter: Wickramanayake HMKSK  
KWickramanayake@virtusa.com

# Agenda

- History of GNU Project and Linux
- Software Licensing Taxonomy
- Linux Distributions
- System Overview
- Conceptual Architecture of Linux Kernel
- Recent Linux Desktops
- Future of Linux in the Enterprise...

# Agenda – Linux in the Enterprise

- Phases of Linux Adoption
- Linux Acceptance
- Linux and Types of Applications
- Future of OS Market
- Hardware Vendor Support for Linux
- Open Source and Linux : Where and Where not
- Linux as a Client in the Enterprise

creating competitive advantage

# History...

# The GNU Project

- Started by Richard M Stallman (RMS) in 1984
- The goal of GNU was a “free” Unix like OS
- GNU software was based on the GPL
- RMS himself wrote GCC, Emacs, GDB

# The GNU Project

creating competitive advantage

- **GNU evolves...**
  - GNU system was “almost” complete by 1991
  - Herd, the GNU kernel was incomplete

# Linux, the missing piece of GNU system

- In 1991, Linus Torvalds start writing a “free Unix like operating system” called “Linux”
- Many developers around the world join Linus
- In 1994, Linux 1.0 is released
- In 1996, LANL uses a 68 node Linux cluster to simulate atomic shock waves

Linus Torvalds

# Software Licensing Taxonomy

creating competitive advantage

Software Type							
Commercial							
Trial Software	█	█					
Non-Commercial Use	█	█					
Shareware	█	█					
Royalty-free binaries	█	█	█				
Royalty-free libraries	█	█	█	█			
Open Source (BSD Style)	█	█	█	█	█		
Open Source (Apache Style)	█	█	█	█	█	█	
Open Source (Linux/GNU Style)	█	█	█	█	█	█	█
	<i>Zero Price Avenue</i>	<i>Redistributable</i>	<i>Unlimited Usage</i>	<i>Source Code Available</i>	<i>Source Code Modifiable</i>	<i>Public "Check-ins" to core codebase</i>	<i>All derivatives must be free</i>

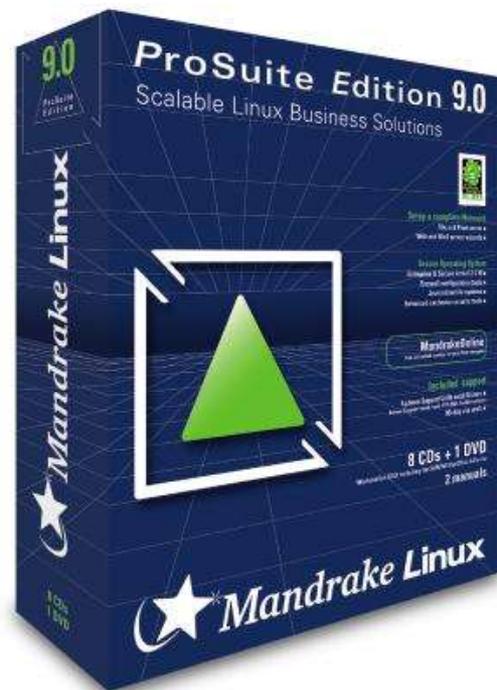

## **Linux distributions**

- Linux Distributions are made by putting together Linux kernel and other software into a single package
- RedHat, Debian, Mandrake, Caldera, SuSE are popular Linux Distributions

## RedHat

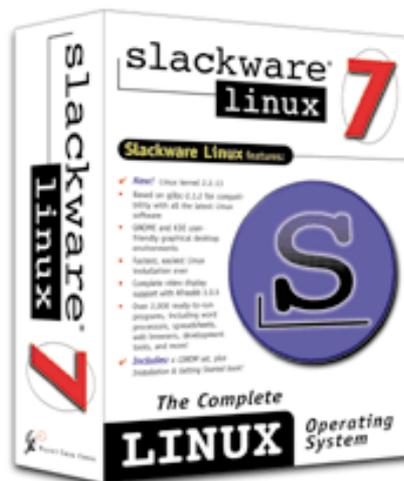

- Supported by many commercial vendors
- Good package management system – RPM

## Mandrake

- Gaining popularity as more “user friendly”
- Impressive graphical user interface

## Slackware

- Known as the *do-everything-yourself* distribution
- Popular among some Linux *gurus*

## Debian

- Excellent package management system - APT
- Extremely stable
- Easy system upgrade
- Thousands of packages

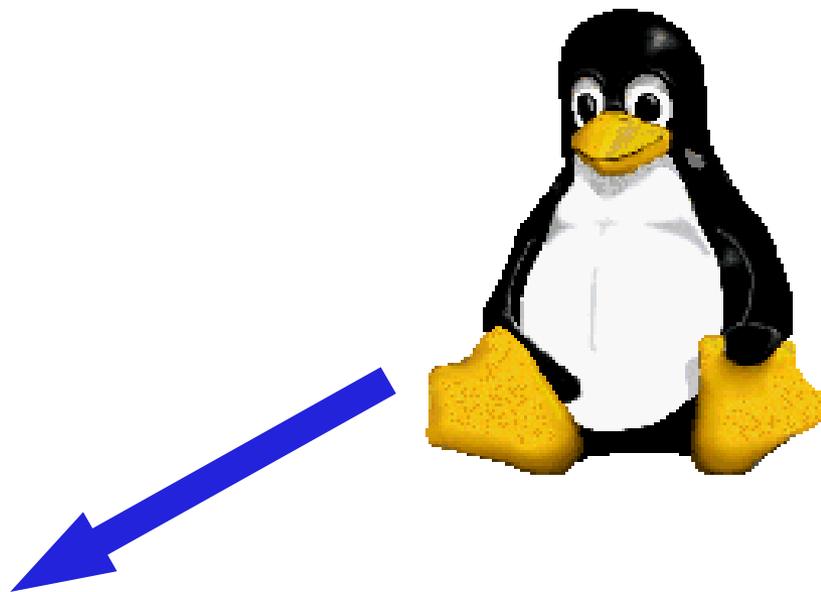

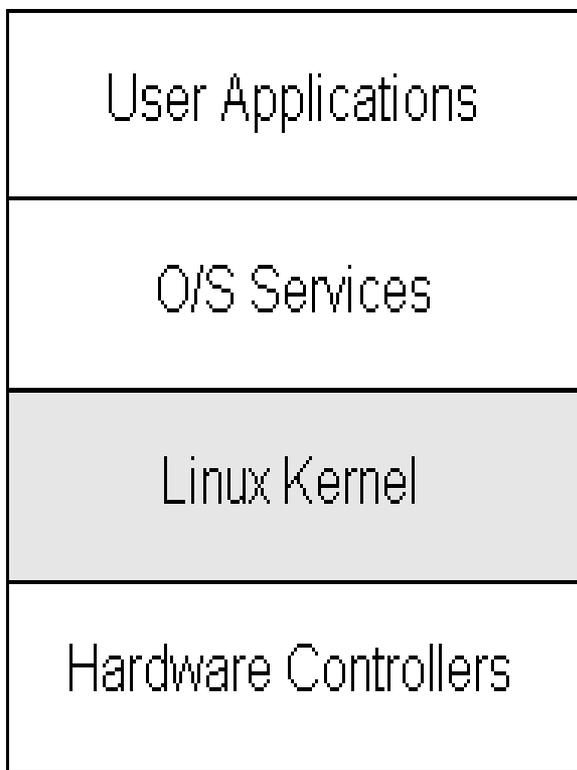

creating competitive advantage

# System Architecture

# System Overview

creating competitive advantage

# Components of a Linux Distribution

- Linux kernel
  - This is the heart!
- Shells and GUIs
  - For command input...
  - Textual - bash, csh
  - Graphical - KDE, GNOME
- System Utilities
  - System utilities (ls, cp, grep,...)
  - Daemons (telnetd, sshd, sendmail, httpd,...)
- Application Programs
  - gcc, openoffice, mozilla,...

## Purpose of the Kernel

- The Linux kernel presents a virtual machine interface to user processes
- Processes are written without needing any knowledge of what physical hardware is installed on a computer

The Linux kernel abstracts all hardware into a consistent virtual interface

- Linux supports multi-tasking in a manner that is transparent to user processes

creating competitive advantage

# Conceptual Architecture of Linux Kernel

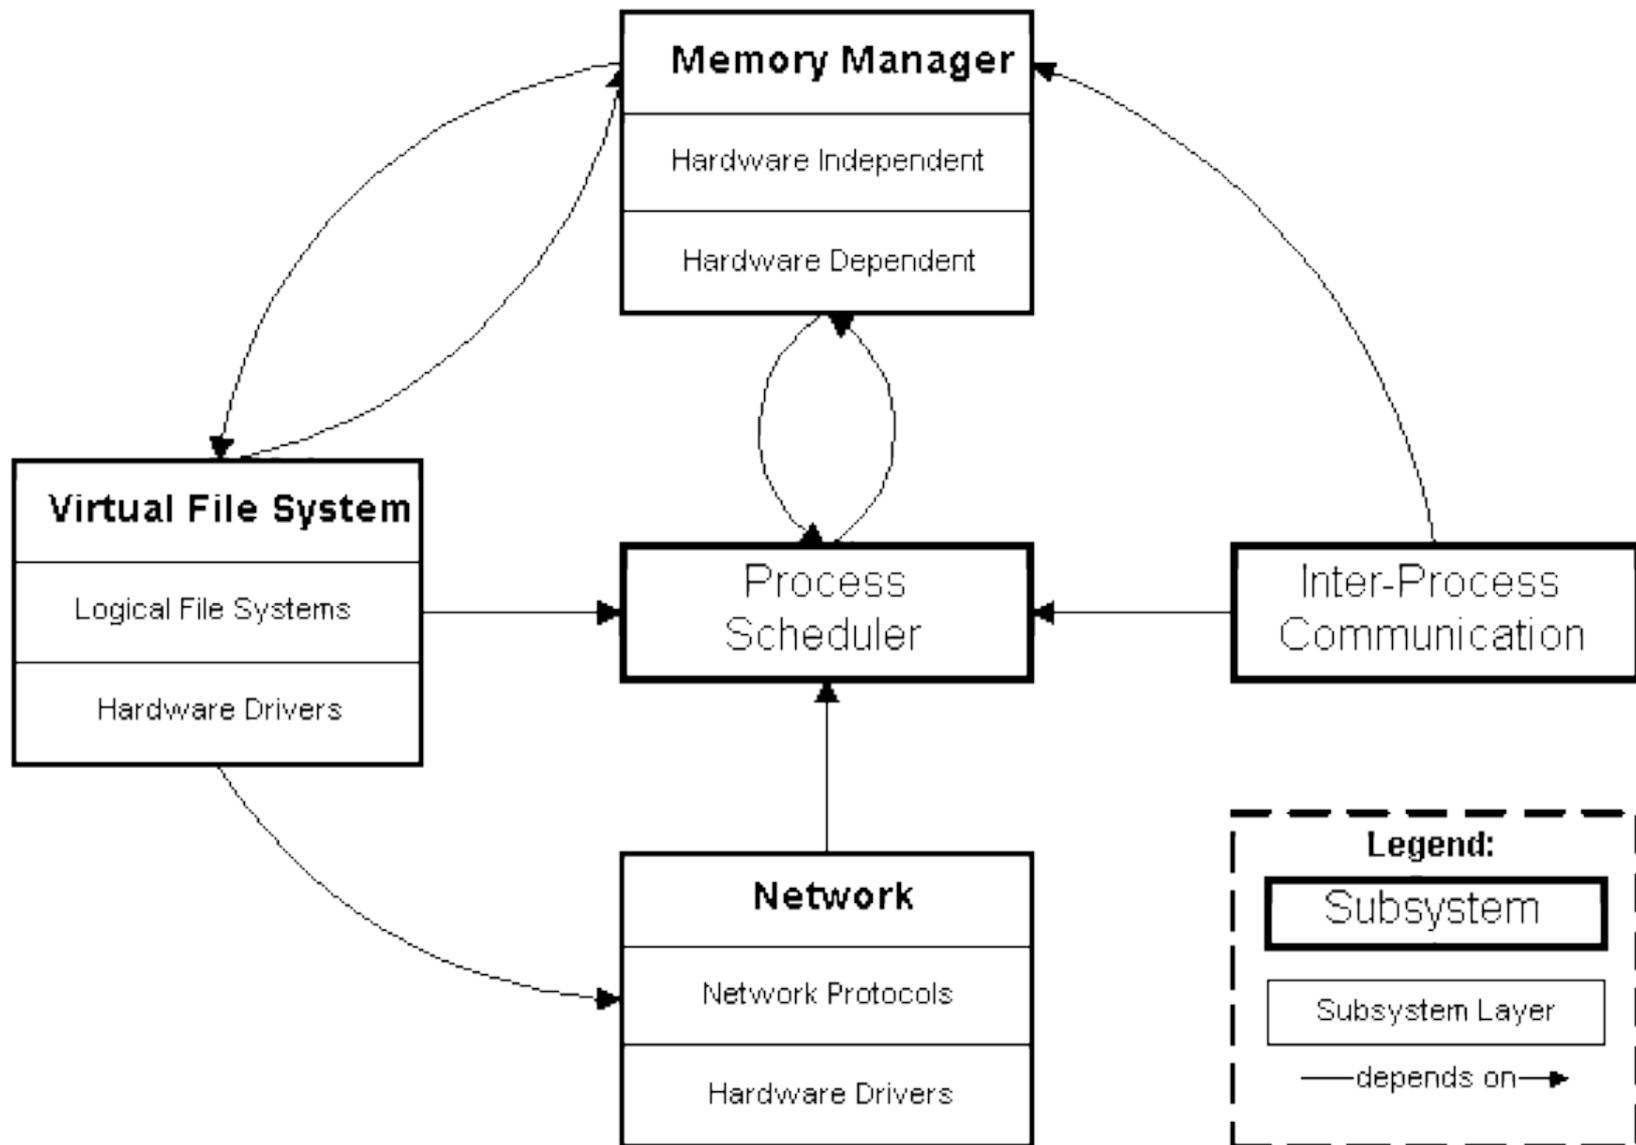

# Architectural Features

- Kernel is composed of five main subsystems
- Linux kernel architecture was designed to support a large number of volunteer developers
- Subsystems that are most likely to need enhancements were architected to easily support extensibility

# Kernel Subsystems

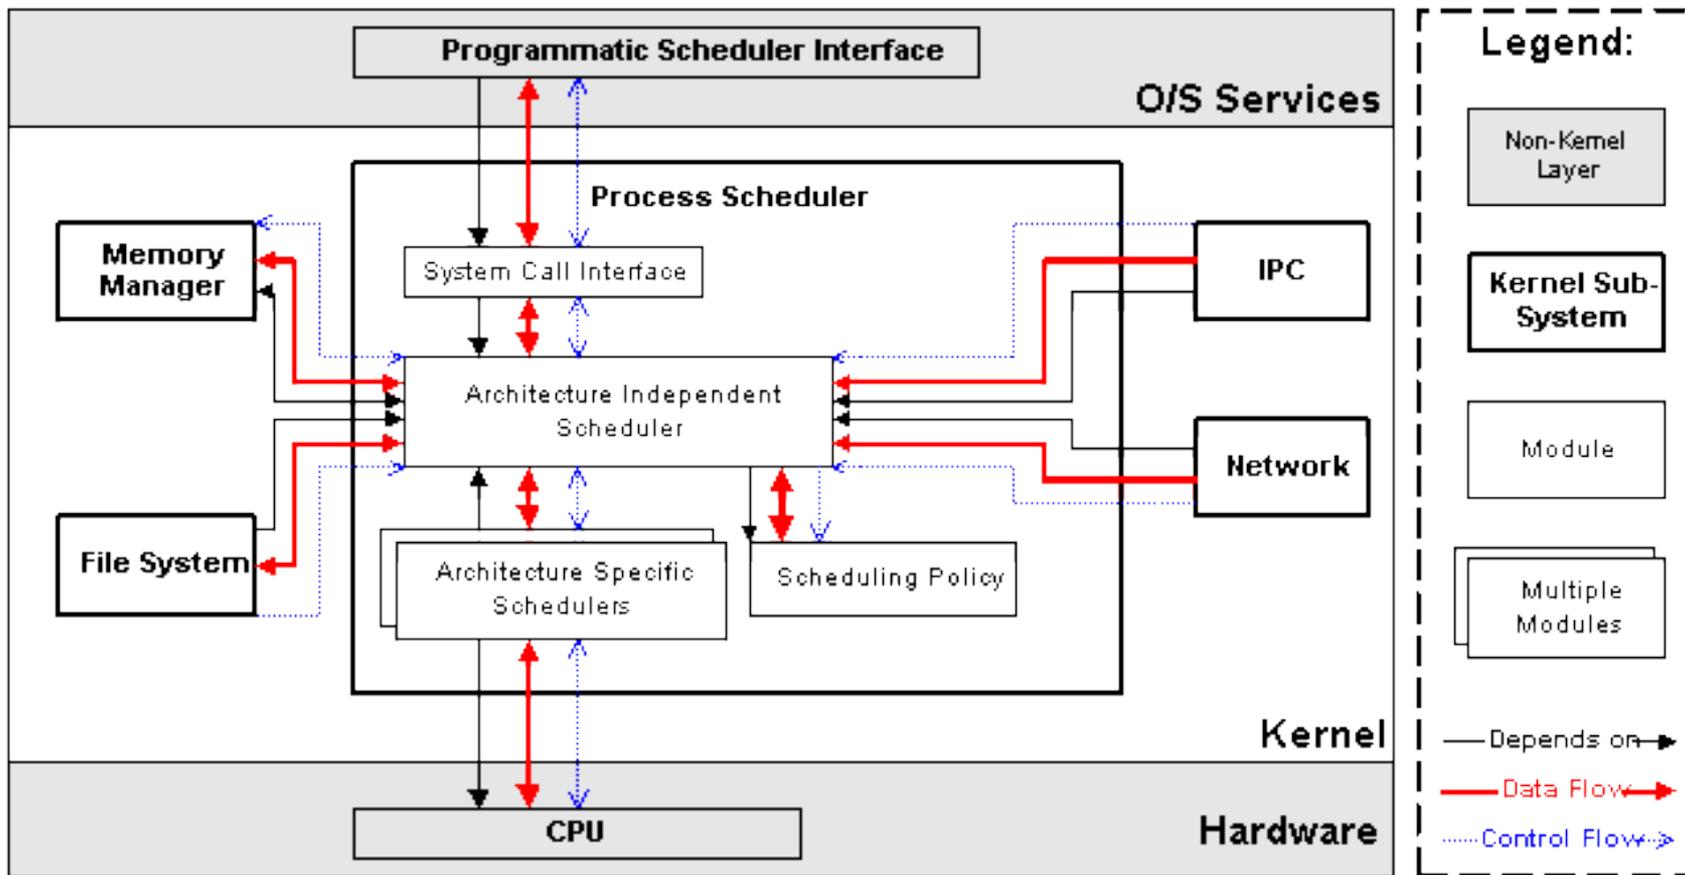

creating competitive advantage

# Process Scheduler Architecture

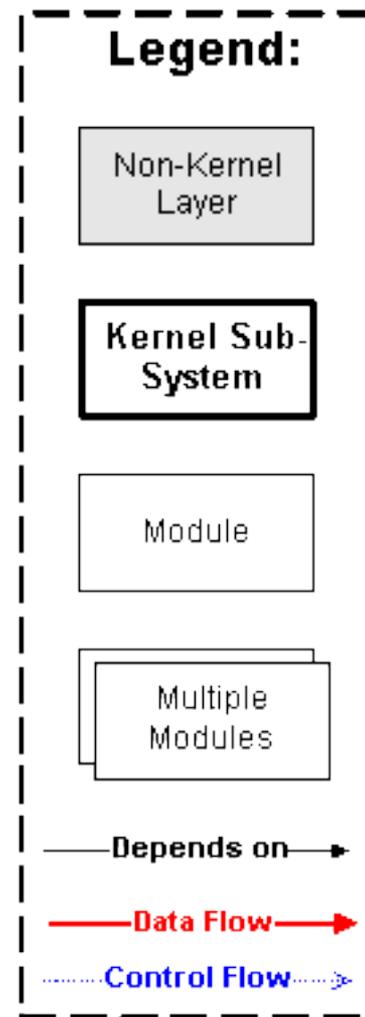

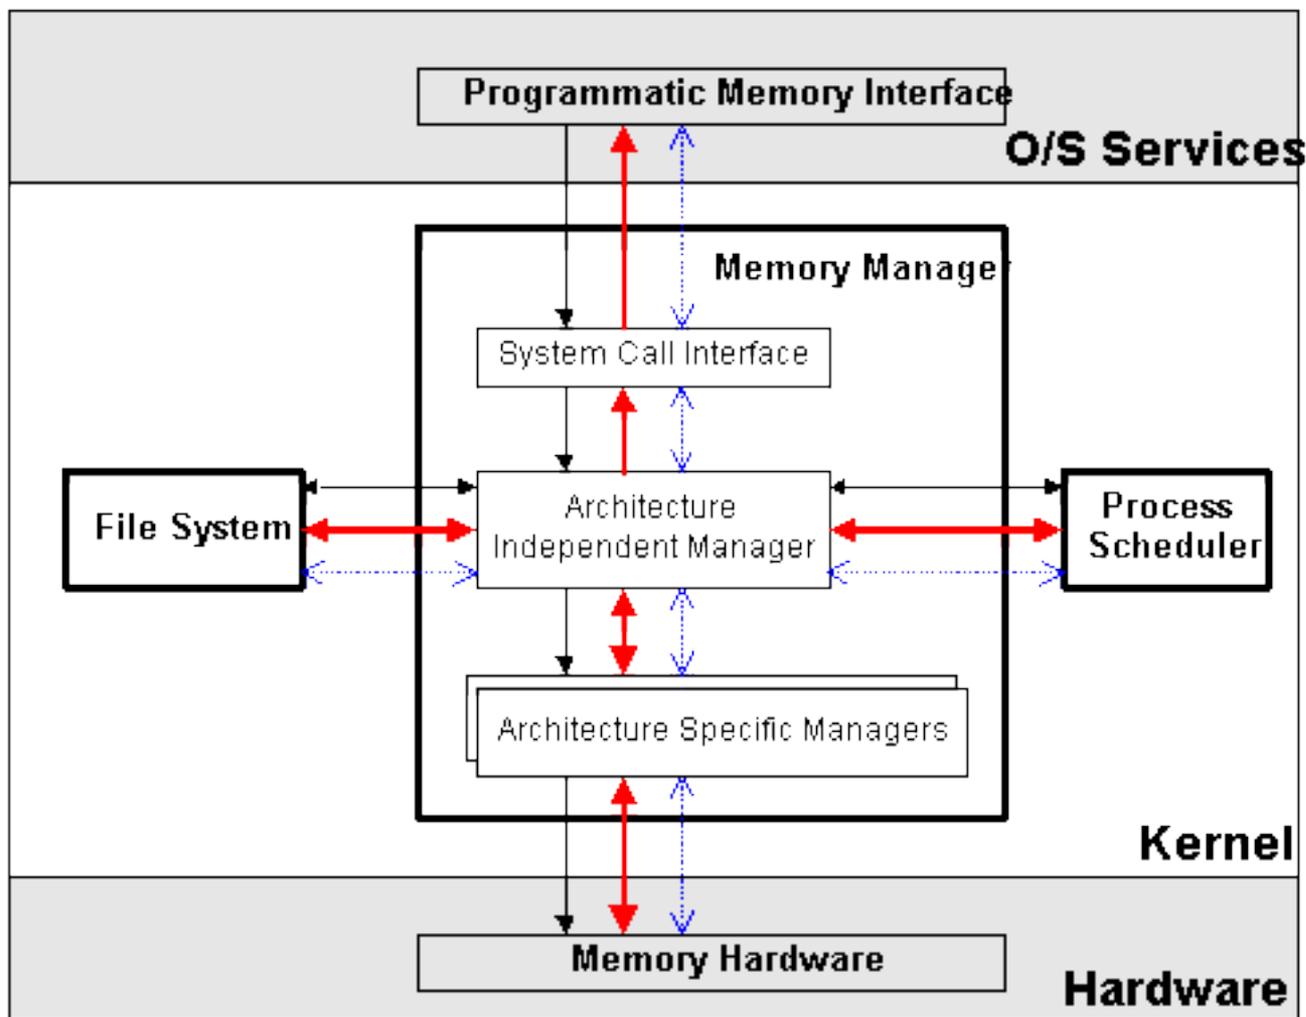

creating competitive advantage

# Memory Manager Architecture

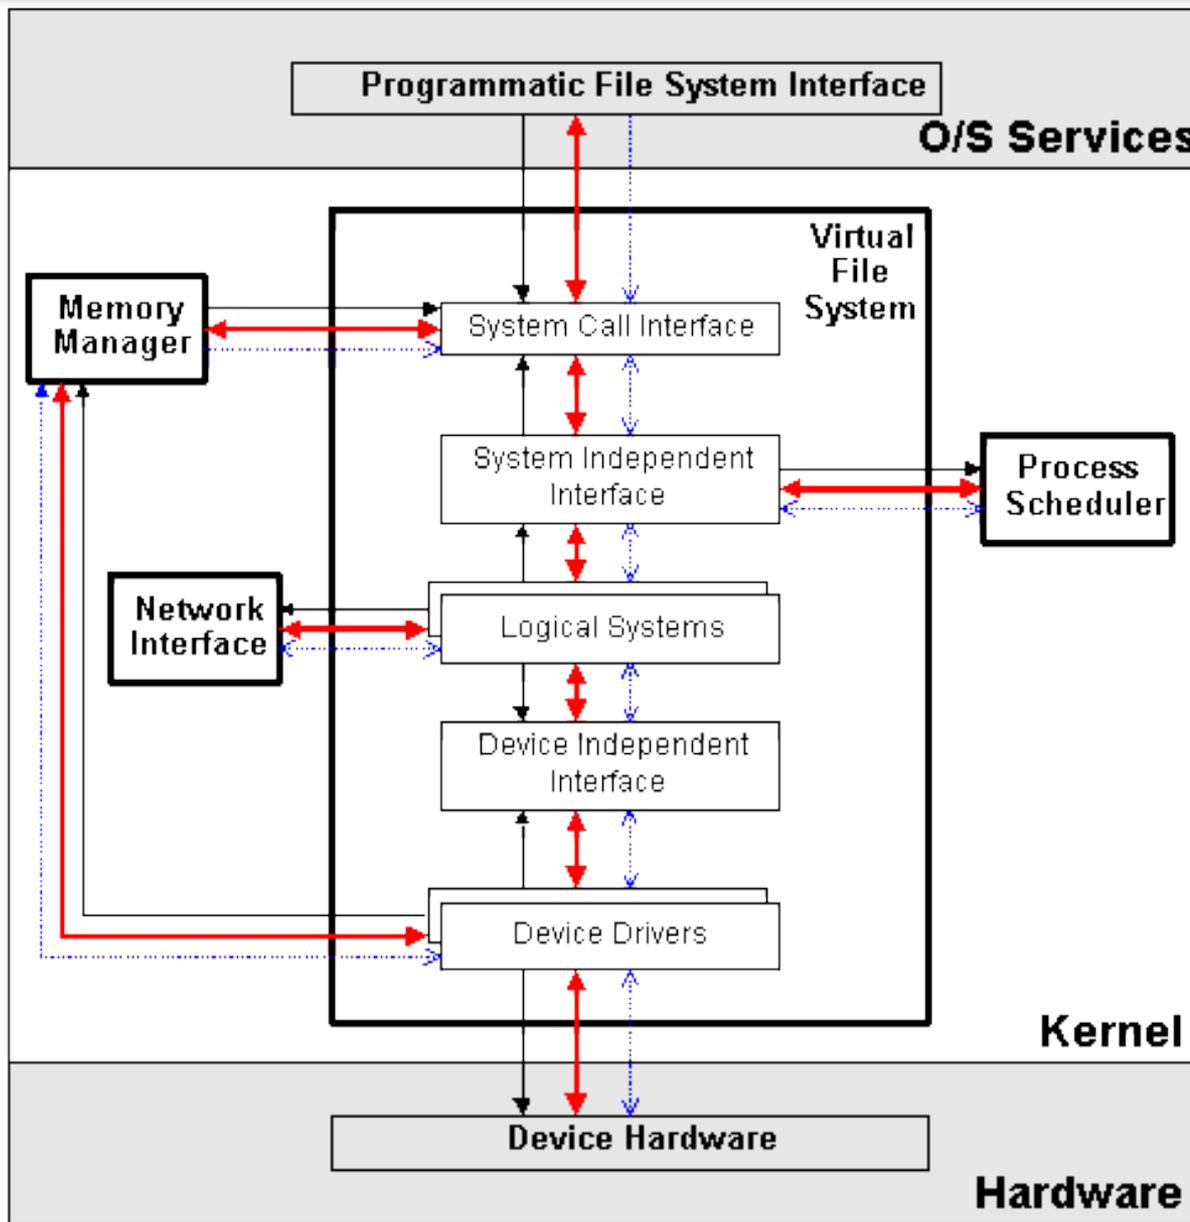

creating competitive advantage

# VFS Architecture

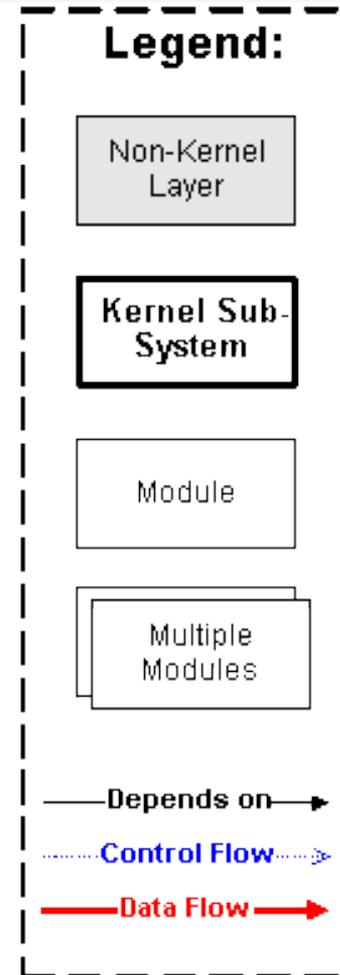

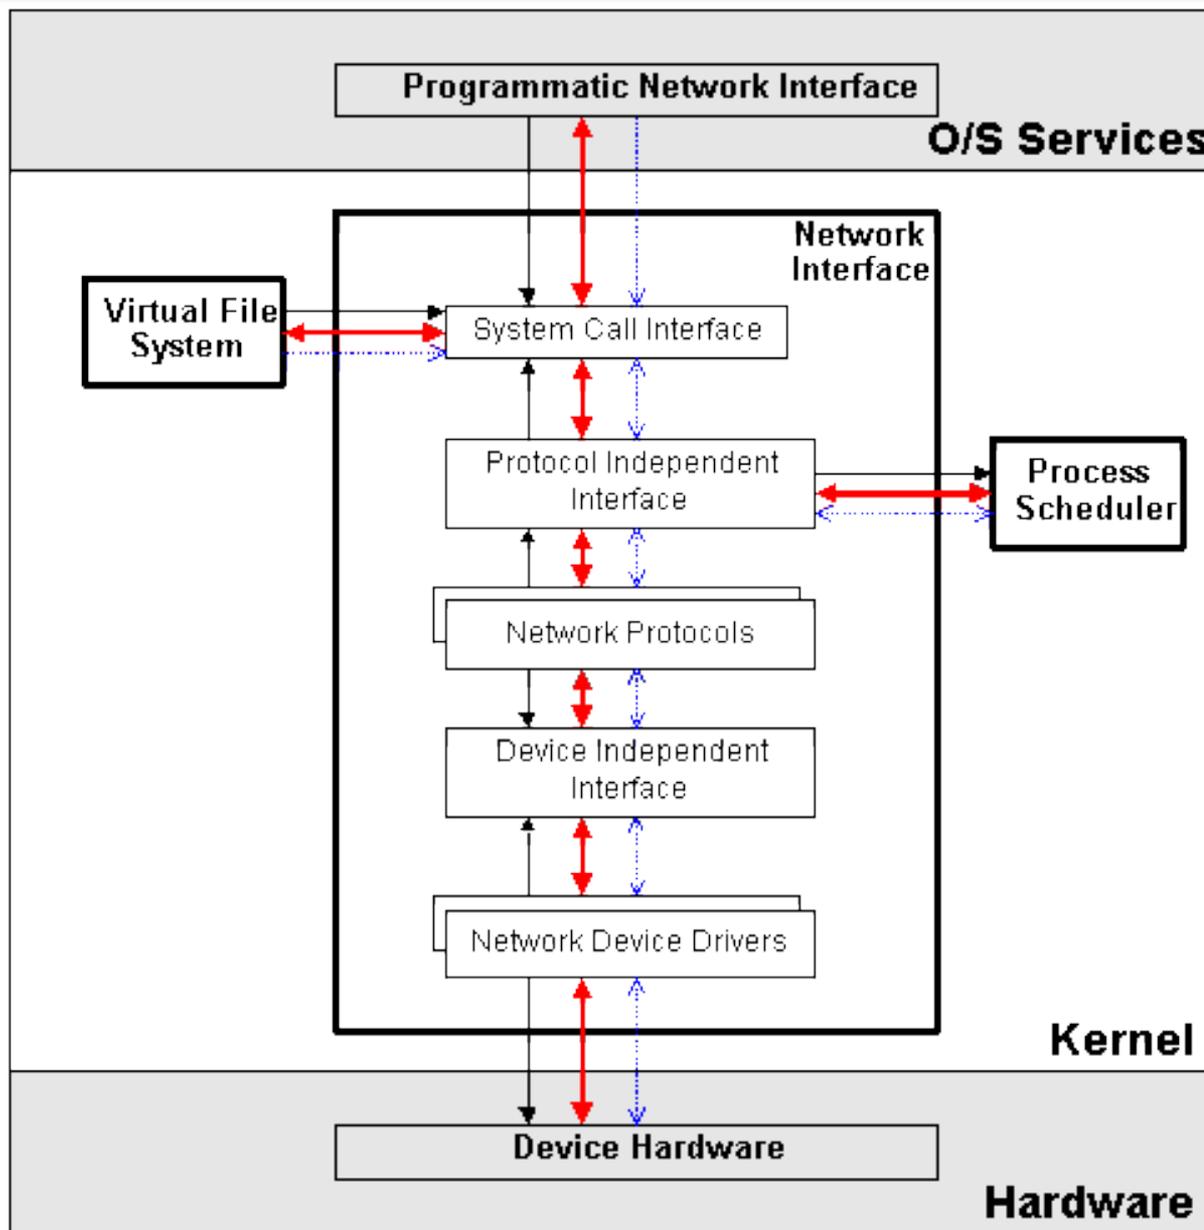

creating competitive advantage

# Network Interface Architecture

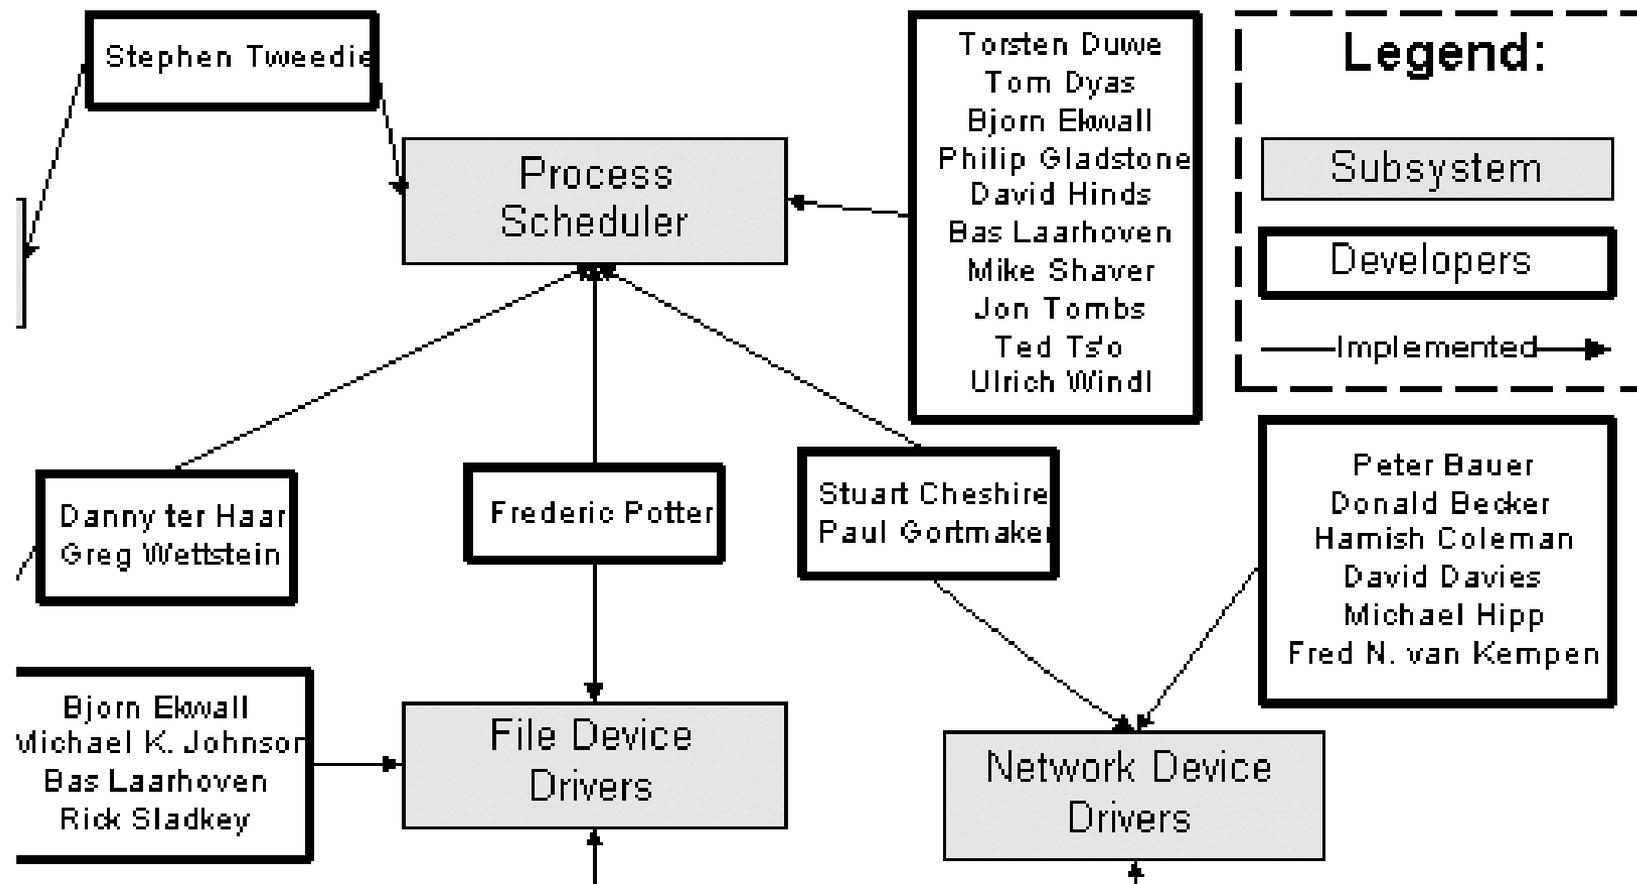

creating competitive advantage

# Supporting Multiple Developers

creating competitive advantage

## Some of the Supported Platforms...

- Compaq Alpha AXP
- Sun SPARC and UltraSPARC
- IBM S/390, MIPS
- Motorola 68000
- PowerPC, PowerPC64
- ARM, Hitachi SuperH
- HP PA-RISC, Intel IA-64,
- DEC VAX, AMD x86-64, CRIS

To say...

**Big or small, Tux serves them all!**

creating competitive advantage

Some screen shots of recent Linux  
desktop...

## Myths about Unix and Linux

### Myths about Unix and Linux

- Unix is obsolete
- Unix is not user friendly
- It is command line based – like DOS
- Installing is hard
- No drivers available
- No support
- No office suite
- No graphical mail client
- No instance messaging system
- No multimedia
- No games

These statements have been repeated over and over, and many people think that they are true!

# Linux In the Enterprise

Copyrighted Material Removed

Copyrighted Material Removed

- Since Linux and open source cover such far-reaching possibilities and multiple market segments — from embedded to high-end, very-large server platforms — enterprise IT management will require time to digest its potential to deliver significant returns and what price to pay to move from current legacies to Linux
- Since most platforms will continue to deliver on road maps for scalability, availability and manageability in all the market segments to which Linux is an aspiring OS environment, the slope on which Linux will rise in enterprise acceptance is governed by return on investment (ROI) analysis

# Which OS in Future?

creating competitive advantage

Copyrighted Material Removed

## Thoughts...

- Microsoft is vulnerable. Many of the users were complaining about NT reliability, utilization and overhead in administration, plus the license costs for hundreds to thousands of servers
- Although Linux will still account for only 18 percent of 2007 server shipment revenue, it continues to be the year-to-year fastest growth OS

## Conclusions

- Greater platform and OS independence
- Benefits from utilizing commodity and open source
- Broader vendor support
- Increased rate of Unix and proprietary replacements
- Increased attention by independent software vendors
- Competitive challenge to Windows pervasiveness
- Open where it makes sense, proprietary by value
